

SHUBHAM SHARMA

📞 9518419517 ✉ rawanshubham@gmail.com 🔗 linkedin.com 🐙 github.com/Shubham043 📖 LeetCode: 1775

Education

NIT, Hamirpur

2021 – May 2025

Bachelors of Technology

GPA: 8.2

Technical Skills

Languages: JavaScript, TypeScript, C++, SQL
Frontend: React, Redux Toolkit (State Management), Performance Optimization, Tailwind CSS
Backend & APIs: Node.js, NestJS, Express.js, REST APIs, Microservices, Authentication (JWT, OAuth)
Databases & Caching: PostgreSQL, MongoDB, Redis, Prisma ORM, Database Design
Cloud & Platforms: AWS Cognito, AWS S3, Vercel, Render, Environment Management
Developer Tools: Git, GitHub, Postman, PgAdmin, Socket.io (WebSocket)

Experience

KAS Global

July 2025 - Present

Full Stack Developer (Intern → PPO)

Full stack development across React dashboards and backend microservices, delivering scalable integrations, performance optimizations, and user-facing features in production.

- Implemented **secure authentication** using JWT, refresh tokens, Google OAuth, email verification, and reset/forgot password with **AWS Cognito**.
- Led **DMS integration** across frontend and backend, covering product lifecycle, variants, pricing, inventory, bulk listing, and order workflows (confirm, cancel, returns, fulfillment).
- Integrated **Walmart order workflows** end-to-end by implementing backend APIs for order retrieval, confirmation, cancellation, and returns, and building corresponding **frontend UI** to manage order states within the dashboard.
- Developed a **unified dashboard chatbot** surfacing marketplace connections, wallet data, and sales analytics with embedded charts and tables.
- Improved backend performance by contributing to **Redis-based caching design** for report-service APIs (15–20s → ms) and proposing scalable data retention strategies for a **notification service** handling 50K records/day using month-wise normalization and **S3** archival.
- Built and maintained **React + Tailwind** dashboards with charts, tables, lazy loading, and production UI fixes.

Projects

TYPEARCADE – Multiplayer Typing Game — MERN Stack, Next.js, Node.js, Socket.io, Vercel [project link](#) 2025

- Built a full-stack real-time typing platform with solo and multiplayer modes using React Hooks and Socket.io.
- Designed leaderboard and profile sections tracking user rank, max/avg WPM, and 50+ historical tests.
- Engineered JWT-based auth, score syncing, and real-time timer/game logic across 2-player arcade sessions.

RESCUELINK – Real-Time Crisis Response Platform — MERN Stack, Socket.io, Leaflet, IndexedDB [Deployed link](#)

- Engineered a full-stack platform enabling users to send SOS alerts with live location and emergency type, instantly visualized on a real-time map for responders.
- Implemented offline-first support using IndexedDB, enabling users to store SOS alerts without internet and automatically sync them when connectivity is restored, improving reliability in low-network conditions.
- Designed a secure Node.js/Express backend with RESTful APIs, geospatial MongoDB queries, and middleware (Helmet, Rate Limiting), and a real-time WebSocket system using Socket.io to broadcast alerts to all dashboards with <100ms latency.

COLLEGE EVENT APP — Node.js, Express, MongoDB

2022 – 2024

- Developed and deployed a college event platform with 1800+ downloads, enabling event updates, participation, and engagement.
- Implemented a live quiz system with real-time updates, achieving 90% student participation during events.

Achievements

- Selected as Core Coordinator for Nimbus App 2k24, led a team of 10 developers to successful launch of the app.
- Delivered a workshop on Flutter, sharing insights and practical knowledge, engaged with 100+ participants.
- Attained a LeetCode rating of 1775:** Demonstrated coding skills and algorithmic thinking by consistently solving challenging coding problems.
- Earned a global contest rank of 1450:** Competed in weekly LeetCode contests 366, securing the 1450th rank out of 28000+ participants.
- Completed over 500+ questions on LeetCode, Codeforces and GeeksforGeeks:** Practiced and mastered various algorithms and data structures, enhancing proficiency and coding efficiency.
